QQ: 749389476

<https://tutorcs.com>

What is Project Scope Management?

- **Scope** refers to all the resources involved in creating the products of the project and the processes used to create them
- A **deliverable** is a product produced as part of a project, such as hardware or software, planning documents, or meeting minutes
- Project scope management includes the processes involved in defining and controlling what is or is not included in a project

Project Scope Management Processes

WeChat: cstutorcs

- **Planning scope:** determining how the project's scope and requirements will be managed
- **Collecting requirements:** defining and documenting the features and functions of the products produced during the project as well as the processes used for creating them
- **Defining scope:** reviewing the project charter, requirements documents, and organisational process assets to create a scope statement
Email: tutorcs@163.com
- **Creating the WBS:** subdividing the major project deliverables into smaller, more manageable components
QQ: 749389476
- **Validating scope:** formalising acceptance of the project deliverables
- **Controlling scope:** controlling changes to project scope throughout the life of the project

Project Scope Management Summary

Planning

Process: Plan scope management

Outputs: Scope management plan, requirements management plan

Process: Collect requirements

Outputs: Requirements document, requirements traceability matrix

Process: Define scope

Outputs: Project scope statement, project documents updates

Process: Create WBS

WeChat: cstutorcs

Outputs: Scope baseline, project documents updates

Monitoring and Controlling

Process: Validate scope

Outputs: Accepted deliverables, change requests, work performance information, project documents updates

Process: Control scope

Outputs: Work performance information, change requests, project management plan updates, project documents updates, organizational process assets updates

QQ: 749389476
<https://tutorcs.com>

Project Start

Project Finish

Planning Scope Management

- The project team uses **judgment** and **meetings** to develop two important plans: the **scope management plan** and the **requirement management plan**
- The **scope management plan** is a subsidiary part of the project management plan
- A **scope statement** describes the characteristic of the product that the project should deliver. It should include:
 - Project justification
 - Brief description of the project's deliverables
 - Summary of all project deliverables
 - Statement of what determines project success – user acceptance criteria

Scope Management Plan Contents

- How to prepare a detailed project scope statement
- How to create a Work Breakdown Structure (WBS)
- How to maintain and approve the WBS
- How to obtain formal acceptance of the completed project deliverables
- How to control requests for changes to the project scope

Requirements Management Plan

- The PMBOK® Guide, 5th edition, describes requirements as:
 - “conditions or features that must be met by the project or present in the product, service, or result to satisfy an agreement or other formally imposed specification”
- Requirements need to be elicited, analyzed, and recorded in enough detail to be included in the scope baseline and be measured once project execution begins.
- The **requirements management plan** documents how project requirements will be analyzed, documented, and managed

<https://tutorcs.com>

Methods for Collecting Requirements

- Interviewing
- Focus groups and facilitated workshops
- Using group creativity and decision-making techniques
WeChat: cstutorcs
- Questionnaires and surveys
- Observation
Assignment Project Exam Help
- Prototyping
Email: tutorcs@163.com
- **Benchmarking**, or **QQ: 749389476** by comparing specific project practices or product characteristics to those of other projects or products **inside or outside the performing organisation**, can also be used to collect requirements
https://tutorcs.com

Requirements Documentation

- **Functional and non-functional requirements**
 - non-functional requirements describe **how the system works**, while functional requirements describe **what the system should do**
- **Business rules** Assignment Project Exam Help
- **Impacts** on any other systems and/or departments Email: tutorcs@163.com
- Support and **training requirements**
- Specific **acceptance criteria** for each requirement
- **Quality requirements** <https://tutorcs.com>

Requirements Traceability Matrix

- A **requirements traceability matrix (RTM)** is a table that lists requirements, their attributes of each requirement, and the status of the requirements to ensure that all requirements are addressed
- Sample entry in an RTM

Video 2: *Project Scope Management*

Learning Obj

- Explain the scope definition process and describe the contents of a project scope statement
- Discuss the process for creating a work breakdown structure using the analogy, top-down, bottom-up, and mind-mapping approaches

QQ: 749389476

<https://tutorcs.com>

Defining Scope

程序代写代做 CS编程辅导

- **Project scope statement** should include at least a product scope description, project deliverables, user acceptance criteria, and detailed information on all project variables.
- It is also helpful to document other scope-related information, such as the project boundaries, constraints, and assumptions.
- The project scope statement should also reference supporting documents, such as product specifications.
- As time progresses, the scope of a project should become more clear and specific

Creating the Work Breakdown Structure (WBS)

- A **WBS** is a deliverable-oriented grouping of the work involved in a project that defines the scope of the project
- WBS is a foundation document that provides the basis for planning and managing project schedules, costs, resources, and changes
 - WeChat: cstutorcs
 - Assignment Project Exam Help
- **Decomposition** is subdividing project deliverables into smaller pieces
 - Email: tutorcs@163.com
- A **work package** is a task at the lowest level of the WBS
 - QQ: 749389476
- The **scope baseline** includes the approved project scope statement and its associated WBS and WBS dictionary
 - <https://tutorcs.com>

<https://tutorcs.com>

Intranet Gantt Chart Organized by Project Management Process Groups

Approaches to Developing WBSs

- Using guidelines: Some organisations, like the DOD, provide guidelines for preparing WBSs
- The **analogy approach**: Review WBSs of similar projects and tailor to your project
- The **top-down approach**: Start with the largest items of the project and break them down
- The **bottom-up approach**: Start with the specific tasks and roll them up
- Mind-mapping approach: **Mind mapping** is a technique that uses branches radiating out from a core idea to structure thoughts and ideas

<https://tutorcs.com>

Sample Mind-Mapping Approach for Creating a WBS

Source: MatchWare's MindView 4 Business Edition

QQ: 749389476

<https://tutorcs.com>

The WBS Dictionary and Scope Baseline

- Many WBS tasks are complex and must be explained more so people know what to do. You can estimate how long it will take and what it will cost.
- A **WBS dictionary** is a document that describes detailed information about each WBS item
- Refer to the textbook (Pg 207) on advice in creating a good WBS

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

程序代写代做 CS编程辅导

Video 3: Project Scope Management

Learning Obj

- Explain the importance of validating scope and how it relates to defining and controlling scope
- Understand the importance of controlling scope

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Validating Scope

- It is very difficult to define a good scope statement and WBS for a project
- It is even more difficult to verify project scope and minimize scope changes
- **Scope validation** involves formal acceptance of the completed project deliverables
- Acceptance is often achieved by a customer inspection and then sign-off on key deliverables

WeChat: cstutorcs

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Controlling Scope

- Scope control involves controlling changes to the project scope
- Goals of scope control
 - influence the factors that cause scope changes
 - assure changes are processed according to procedures developed as part of integrated change control, and
 - manage changes when they occur
- **Variance** is the difference between planned and actual performance

<https://tutorcs.com>

What Went Wrong?

- A project scope that is too broad and grandiose can cause severe problems
 - Scope creep and an over-emphasis on technology for technology's sake resulted in the bankruptcy of a large pharmaceutical firm, Texas-based FoxMeyer Drug
 - In 2001, McDonald's fast-food chain initiated a project to create an intranet that would connect its headquarters with all of its restaurants to provide detailed operational information in real time. After spending \$170 million on consultants and initial implementation planning, McDonald's realized that the project was too much to handle and terminated it

Some Best Practices

- Best practices to avoid scope problems:
 1. Keep the scope small.
 2. Involve users in scope management.
 3. Use off-the-shelf hardware and software whenever possible.
 4. Follow good project management processes.
- Principles from IBM's Rational Unified Process® (RUP):
[Email: tutorcs@163.com](mailto:tutorcs@163.com)
 - Adapt the process
 - Balance competing stakeholder priorities
 - Collaborate across teams
 - Demonstrate value iteratively
 - Elevate the level of abstraction
 - Focus continuously on quality

<https://tutorcs.com>

What is ‘Scope Creep’?

- is it applicable to an Agile framework?

- Scope Creep

- changes to the scope baseline of a project (i.e. the addition of new product features that occur after the project scope has been determined and/or approved)

Assignment Project Exam Help

- Is it a bad thing?

Email: tutorcs@163.com

- How do we accommodate change?

The Agile Lifecycle

Scoping your project and managing the scope

Envision Stage

- Determine requirements
- Confirm team members
- Set up team collaboration tools
- A documented project charter –describing scope and overall objectives
- Creation of Product Data Sheet (PDS)
 - Email: tutorcs@163.com
 - Project objectives
 - Timelines
 - Cost estimates
 - Constraints
 - Prioritisation

WeChat: cstutorcs
Assignment Project Exam Help

Scoping your project and managing the scope

Speculate Stage

- Feature delivery plan
- Estimates for each feature
- A set of requirements for the Sprint
- A list of features to be developed
- Effort estimates for each feature
- Risks will be identified

WeChat: cstutorcs
Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Understanding scope throughout the project

Stage 1: VISION

Description: The goals for the product and its alignment with the company's strategy.
Owner: Product owner
Frequency: At least annually

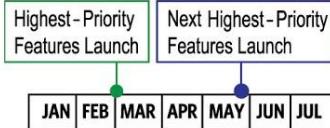

Stage 2: PRODUCT ROADMAP

Description: Holistic view of product features that create the product vision.
Owner: Product owner
Frequency: At least biannually

Stage 3: RELEASE PLANNING

1 - 4 Weeks

(Stages 1 - 3 are common practices outside of scrum)

Stage 4: SPRINT PLANNING

<https://tutorcs.com>

Description: Establish specific iteration goals and tasks.
Owner: Product owner and development team
Frequency: At the start of each sprint

Preparation

Execution

Agile Principles in regards to Scope Management

The agile principles that relate to scope management:

- (1) The highest priority is to satisfy the customer through early and continuous delivery of valuable software.
- (2) Changing requirements are welcomed – even late in development. Agile processes harness change for the customer's competitive advantage.
[Email: tutorcs@163.com](mailto:tutorcs@163.com)
- (3) To deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.
<https://tutorcs.com>

Does Agile Projects have control mechanisms

- Agile-specific techniques to manage and monitor your Agile Projects.
- Scope is managed by the backlog list.
- Scope is controlled by implementing features and adding new features
- Never adjust the scope of the current sprint!

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

What's different between traditional and Agile Scope Management

Traditional Approach

Project teams attempt to identify and document complete scope at the beginning of the project

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

Organizations view scope change after the requirements phase is complete as negative.

Project managers rigidly control and discourage changes once stakeholders sign off on requirements.

QQ: 749389476

<https://tutorcs.com>

Agile Approach

High level requirements are gathered at the beginning of the project and refined throughout the project

Organizations view change as a positive way to improve a product as the project progresses.

Change management is an inherent part of agile processes.

The product owner determines the value and priority of new requirements and adds to the product backlog.

What's different between traditional and Agile Scope Management (cont...)

Traditional Approach

The cost of change increases over time, while the ability to make changes decreases.

Projects often include scope bloat, unnecessary product features included out of fear of mid-project change.

Agile Approach

You fix resources and schedule initially. New features with high priority don't necessarily cause budget or schedule slip; they simply push out the lowest-priority features.

WeChat: cstutorcs

Assignment Project Exam Help
Email: tutorcs@163.com

Scope is determined based on which features directly support the project vision, the release goal, and the sprint goal.

Creates the most valuable features first to guarantee their inclusion.
Less valuable features might never be created.

QQ: 749389476

<https://tutorcs.com>

Which to use? 程序代写代做 CS 编程辅导

- Agile methods are recommended for ~~EVERY kind of project.~~
- For projects where requirements are likely to change, more traditional methods are perhaps a better choice.
- For projects with high levels of change, Agile methods tend to be a better choice.

WeChat: cstutors

Assignment Project Exam Help

- Agile frameworks are designed to welcome and manage change – change is expected and accepted throughout the life of the project.

QQ: 749389476

- PMI does not advocate any particular methodology
